19. Appendix: Competitive Landscape

1. What Is CAPSTONE?

CAPSTONE is an **AI-powered wealth command layer** for High Net-worth Individuals (HNIs) in India.

It is **not**:

- A bank app
- A mutual fund distributor
- An ITR filing website
- A net worth tracker for regular savers

It **is**:

- A single screen that shows **all family wealth** across all accounts, entities, and asset types
- A **24/7 tax radar** that catches problems before the Income Tax Department sends a notice
- An **automated tax-saving engine** that finds legal ways to reduce your tax bill
- An **honesty check** on your wealth managers, who only see their own slice of your money
- A **time machine** that simulates big financial decisions before you make them
- A **survival vault** that tells your family exactly what you own and how to access it if something happens to you

CAPSTONE sits **above** your banks, brokers, PMS managers, and CA. It does not hold your money. It does not sell you products. It gives you **clarity, control, and action**.

---

2. Who Is This For?

Primary user (the "Principal")

Attribute	Detail
Wealth	₹5 Crore to ₹100 Crore investable assets
Profile	Business owners, tech founders, senior executives, inheritors, promoters
Pain	Money spread across 10–30 accounts, 2–5 wealth managers, multiple legal entities
Behaviour	Checks portfolio often, hates tax surprises, wants control without doing everything manually

Secondary users (via permissioned access)

Role	What they need
Spouse	Family net worth view, emergency access
CA / Tax advisor	Tax ledger, AIS mismatches, harvest recommendations
RM (Relationship Manager)	Only their bank's slice — never full picture
Family office CIO	Investment view across entities
Successor	Emergency playbook only — triggered by event

Who this is NOT for

- Salaried employees with one bank account and one demat (use FOLO, CRED, etc.)
- UHNIs (₹500Cr+) who already pay ₹50L+/year for a full family office (may white-label CAPSTONE later)
- People who want someone else to manage everything with zero involvement

Market size (India, 2026)

- ~390,000 HNWIs, ~$1.65 trillion in wealth (Capgemini World Wealth Report 2026)
- Most HNIs use **multiple wealth managers** — no single firm sees the full picture
- Large share of wealth still managed via Excel, WhatsApp, and informal CA relationships
- India leads globally in AI adoption for finance (86% of affluent investors use AI — HSBC-Ipsos 2026)

---

3. The Problem We Solve

Problem 1: Wealth is invisible and scattered

Your money lives in:

- Personal savings account (HDFC)
- Joint account with spouse (ICICI)
- Hindu Undivided Family (HUF) demat
- Private family trust
- Zerodha for stocks
- Groww for mutual funds
- Two PMS accounts
- One AIF (Alternative Investment Fund)
- Real estate in Jaipur and Mumbai
- Gold, insurance, EPF, NPS

No one — not your CA, not your HDFC RM, not your spouse — sees the full picture in real time. Everyone works off outdated PDFs and Excel sheets updated once a quarter.

Problem 2: Tax notices come from data mismatches, not fraud

The Income Tax Department now knows almost everything you do through:

- **AIS** (Annual Information Statement) — all income reported by banks, brokers, employers
- **26AS** — all TDS deducted
- **TIS** (Taxpayer Information Summary) — summary of what's on file

Your CA files your return based on documents you give them. If a bank reported ₹50 lakh FD interest to the government but your CA missed it in the return — **you get a notice**. This happens to HNIs who pay every rupee of tax correctly. The system is about **reconciliation**, not evasion.

Problem 3: You overpay tax because no one optimizes across accounts

Tax-loss harvesting means: sell investments that are in a **loss** to offset profits elsewhere, legally reducing tax. Your HDFC wealth manager cannot see your Zerodha losses. Your Zerodha broker cannot see your Groww gains. **Nobody optimizes across all accounts.** HNIs with surcharge pay up to 26% on short-term gains — every unharvested loss costs real money.

Problem 4: Wealth managers have conflicts of interest

Your HDFC RM earns commission on products they sell you. They only see HDFC holdings. They may recommend a large-cap fund you **already own** in Zerodha — you pay double fees for the same exposure. PMS managers charge 2% + 20% performance fee — but is anyone tracking if they're actually beating the market?

Problem 5: Big decisions are made on phone calls, not models

"I want to route ₹2 Cr through my HUF to buy commercial property" — your CA gives a verbal answer. No one models the tax saved vs money locked up vs compliance timeline. ₹5 crore decisions deserve more than a 15-minute call.

Problem 6: Your family is unprepared for emergencies

If something happens to you tomorrow:

- Does your spouse know about all 20+ accounts?
- Are nominees updated everywhere?
- Who has the locker key? The property papers? The unlisted share certificates?

₹2.4 lakh crore lies **unclaimed** in India because families didn't know money existed (industry estimates).

---

4. What Already Exists (And Why It's Not Enough)

Existing Solution	What It Does	Why It Fails for HNIs
FOLO, Vault, WealthNest	Net worth app via Account Aggregator	Individual PAN only; no entity graph; no tax engine
NetWorthOS, Famli, BYLD	AI family wealth (early stage)	No AIS firewall; no cross-broker harvesting; incomplete held-away
HDFC/ICICI Private Banking	RM + premium card	Only sees own AUM; 3–5 legacy systems internally
Equirus, 360 ONE	Wealth-tech for their clients	Captive — won't optimize tax on competitor-held assets
EZTax, VittSphere, Saltman	ITR filing, tax Q&A	Seasonal (March); not continuous; no live portfolio link
Asset Vantage, MProfit	Family office B2B software	₹50L+ enterprise; not consumer AI-native
Addepar (global)	UHNW reporting	No India tax engine; enterprise-only; no AIS integration

CAPSTONE's white space: Unified family wealth + continuous tax simulation + held-away completeness + AI action cards — **institution-neutral**, owned by the HNI.

---

5. The Six Core Features (Plain English)

These six features are the heart of CAPSTONE. Everything else in this document supports them.

Feature 1: The "God Mode" Family Dashboard

The problem in one sentence:
Your wealth is a mess of PDFs and CA Excel sheets spread across you, your spouse, an HUF, and a private trust — and nobody sees it all at once.

What CAPSTONE does:
Puts **everything on one screen**. Automatically connects to banks, Zerodha, PMS, real estate records, and more. You open the app and instantly see:

> *"The family is worth ₹42 Crores. ₹18 Cr is in the HUF. ₹12 Cr is yours personally. ₹4 Cr is tied up in real estate."*

No waiting for your CA to manually update a spreadsheet.

How it works (simple):

```
YOU open app
    ↓
CAPSTONE pulls data from:
    • Banks (via Account Aggregator)
    • Brokers — Zerodha, Groww, Upstox (via AA + CAS statements)
    • PMS / AIF (via email/CAS parser + manual upload)
    • Real estate (deed upload + valuation)
    • Insurance, EPF, NPS (via AA)
    ↓
CAPSTONE maps everything to the right person/entity:
    • You (individual)
    • Spouse (individual / joint)
    • HUF
    • Family Trust
    • Private Ltd (if applicable)
    ↓
One screen shows family total + breakdown by entity + breakdown by asset type
```

What the user sees on screen:

Section	Example
Family net worth	₹42.3 Cr ▲ ₹8.2L this month
By entity	You ₹12.1 Cr · HUF ₹18.4 Cr · Spouse ₹4.2 Cr · Trust ₹5.1 Cr · RE ₹2.5 Cr
By asset class	Equity 38% · Debt 22% · RE 18% · Alts 14% · Cash 8%
Held-away alert	58% of wealth is outside your primary bank
Last updated	4 hours ago (auto-sync)

Developer notes:

- Module name: `EntityWealthGraph`
- Requires: AA integration + off-AA ingestion pipeline + entity ownership mapping
- Key challenge: AA does not support HUF/trust/company accounts natively — need document upload + CA feed for these
- See Section 10 for data model

Feature 2: The Tax-Notice Firewall

The problem in one sentence:
Most tax notices happen because your CA missed a transaction that the government **already knows about** via AIS.

What CAPSTONE does:
Connects to government tax data and runs a **24/7 scan**. If a bank reported ₹50 lakh FD interest to the government but it's missing from your tax file, CAPSTONE flashes a **red warning** and helps fix the mismatch **before** the taxman sends a notice.

How it works (simple):

```
CAPSTONE has YOUR data (from banks, brokers, AA)
    +
CAPSTONE has GOVERNMENT data (AIS, 26AS, TIS — with your consent)
    ↓
Every night (and on-demand), CAPSTONE compares:
    "What did the government receive?"  vs  "What does your tax file show?"
    ↓
MISMATCH found?
    → Red alert: "₹50L FD interest from SBI reported in AIS — not in your ledger"
    → Suggested fix: "Add to income under 'Other Sources' — advance tax may apply"
    → One-click export to CA with full reconciliation memo
    ↓
NO mismatch?
    → Green: "AIS clean — last checked 6 hours ago"
```

Types of mismatches CAPSTONE catches:

Mismatch Type	Example	Consequence if missed
Missing income	FD interest in AIS, not in return	Notice + interest
Wrong classification	Foreign stock gain filed as domestic	Scrutiny
TDS not claimed	TDS in 26AS, not in return	Lost refund / notice
Duplicate reporting	Same gain in AIS twice	Overpayment / notice
Schedule FA gap	US brokerage in AIS, not in foreign asset schedule	Black Money Act risk
Schedule AL gap	Assets not disclosed (income > ₹1 Cr)	Penalty

What the user sees:

```
┌──────────────────────────────────────┐
│  TAX-NOTICE FIREWALL          🟢 CLEAN  │
│  Last scan: Today, 3:42 AM              │
├──────────────────────────────────────┤
│  AIS entries checked:        847        │
│  Matched:                    841        │
│  ⚠️  Needs attention:          6        │
├──────────────────────────────────────┤
│  🔴 SBI FD interest ₹50L — not in ledger │
│  🟡 Zerodha STCG ₹3.2L — class mismatch  │
│  [View all] [Export to CA] [Fix now]     │
└──────────────────────────────────────┘
```

Developer notes:

- Module name: `TaxNoticeFirewall` / `AISReconciliationEngine`
- Requires: Income Tax portal integration (AIS/26AS/TIS fetch with user consent), broker/bank ledger, diff engine
- Output: Reconciliation report (PDF), CA export, pre-filled ITR draft fields (not filing — preparation)
- Legal: User must authenticate via IT portal credentials or e-Filing API; store encrypted, consent-bound

Feature 3: The "Free Money" Button (Automated Tax Harvesting)

The problem in one sentence:
You pay heavy taxes and surcharges on profits, but no one scans **all your brokers** to find legal loss offsets.

What CAPSTONE does:
Scans every stock and mutual fund you own across **all brokers and entities**. Finds investments currently in a **loss**. Pairs them against your **profits** elsewhere. Gives you an Action Card:

> *"Sell these 400 shares of Tata Steel in your Groww account today. It will offset the profits in your HDFC account and legally save you ₹3.2 Lakhs in taxes this year."*

You review, confirm, and execute (CAPSTONE does not trade — it tells you exactly what to do).

How it works (simple):

```
CAPSTONE scans ALL portfolios (lot-level):
    Zerodha: INFY +₹8L (profit), TATASTEEL -₹3.8L (loss)
    HDFC demat: RELIANCE +₹4L (profit)
    Groww MF: Large cap fund -₹1.2L (loss)
    HUF demat: ITC +₹2.5L (profit)
    ↓
Tax engine calculates best pairings:
    "Pair TATASTEEL loss (Groww) against RELIANCE gain (HDFC)"
    "Pair MF loss against INFY gain"
    ↓
Ranks by ₹ saved per ₹ transaction cost
    ↓
Action Card generated:
    WHAT to sell, WHERE, HOW MANY, SAVE how much
    ↓
User: [Export to broker] [Share with CA] [Mark as done]
```

Action Card example:

```
┌──────────────────────────────────────────────────┐
│  💰 FREE MONEY — Tax Harvest Opportunity          │
│  Save ₹3,20,000 · Execute by March 12, 2026       │
├──────────────────────────────────────────────────┤
│  SELL: 400 shares TATASTEEL (Groww, Lot #892)     │
│  LOSS: ₹3,80,000 (short-term)                     │
│                                                   │
│  OFFSETS: RELIANCE gain (HDFC demat) ₹4,00,000    │
│                                                   │
│  Without action: Tax ₹1,00,000                    │
│  With action:    Tax ₹22,500                      │
│  YOU SAVE:       ₹77,500 (+ surcharge savings)    │
│                                                   │
│  [Simulate alternatives] [Export] [Done ✓]        │
└──────────────────────────────────────────────────┘
```

Rules the engine must know (India-specific):

- STCG on equity: 20% (post July 2024)
- LTCG on equity: 12.5% above ₹1.25L exemption
- Surcharge slabs: up to 37% on income > ₹5 Cr
- No wash-sale rule in India (but CAPSTONE still models repurchase timing)
- Loss carry-forward: 8 years (must file ITR on time)
- Harvest window: typically Jan–March, but opportunities exist year-round

Developer notes:

- Module name: `TaxHarvestOrchestrator`
- Requires: Lot-level cost basis across all demats, real-time or EOD prices, tax rule engine
- Does NOT execute trades — generates instructions only
- Must handle: PMS, AIF pass-through gains separately

Feature 4: The Wealth Manager "Honesty Check"

The problem in one sentence:
Your HDFC manager only sees HDFC. Your ICICI guy only sees ICICI. They sell you the same things, double-charge fees, and you never know who's actually performing.

What CAPSTONE does:
Sits **above all of them** (neutral — not tied to any bank). Alerts you when:

- Your HDFC manager recommends a fund you **already own** in Zerodha
- Two PMS managers have **overlapping holdings** (paying double fees for same stocks)
- A PMS manager is **underperforming** the benchmark after fees
- An RM recommends a product with **high commission** when a cheaper direct alternative exists

How it works (simple):

```
CAPSTONE knows ALL holdings across ALL institutions
    ↓
When RM sends recommendation (email parse / manual entry / API):
    CAPSTONE checks: "Do you already own this?"
    ↓
YES → Alert: "You already hold this via Zerodha — 68% overlap"
    ↓
CAPSTONE ranks managers quarterly:
    PMS A: +14.2% gross, −2.1% vs Nifty, 2% fee → net underperformer
    PMS B: +11.8% gross, +1.4% vs Nifty, 1.5% fee → net outperformer
    HDFC RM portfolio: 0.8% fee drag on duplicate funds
```

What the user sees:

```
┌──────────────────────────────────────────────┐
│  HONESTY CHECK — Manager Scorecard           │
├──────────────────────────────────────────────┤
│  ⚠️  ALERT: HDFC RM recommended "ABC Large Cap"  │
│      You already own 68% overlap via Zerodha  │
│      Duplicate fee cost: ~₹42,000/year        │
├──────────────────────────────────────────────┤
│  PMS RANKING (after fees, 12 months)          │
│  1. Marcellus PMS     +3.2% vs benchmark ✅   │
│  2. Ambit PMS         +0.8% vs benchmark ✅   │
│  3. XYZ PMS           −2.1% vs benchmark 🔴   │
├──────────────────────────────────────────────┤
│  Wallet share: HDFC 24% · Zerodha 31% · ICICI 18% │
│  Held-away from primary RM: 61%               │
└──────────────────────────────────────────────┘
```

Developer notes:

- Module name: `ManagerHonestyCheck` / `HeldAwayCommandCenter`
- Requires: Full holdings map, benchmark data, fee schedule per product (manual config + AMFI/SEBI data)
- Sensitive: Frame as factual ("overlap detected") not accusatory ("RM is cheating") — legal safety

- RM recommendations: email parser, WhatsApp forward, manual entry in v1

Feature 5: The "Time Machine" Simulator

The problem in one sentence:
You make ₹5 crore decisions based on a 15-minute phone call with your CA — with no model, no timeline, no comparison.

What CAPSTONE does:
You tell the AI what you want to do. It instantly runs the math, compares tax saved vs money locked up, and generates a **12-month compliance calendar** — which forms to file, which accounts to open, when to move money.

Example user query:

> *"I want to route ₹2 Cr through my HUF to buy commercial real estate in Pune."*

What CAPSTONE returns:

```
┌──────────────────────────────────────────────────┐
│  TIME MACHINE — Scenario Analysis                │
│  Query: Route ₹2Cr via HUF for Pune commercial RE │
├──────────────────────────────────────────────────┤
│  TAX COMPARISON                                  │
│  Route via personal:  Estimated tax ₹28.4L       │
│  Route via HUF:       Estimated tax ₹18.2L       │
│  SAVINGS:             ₹10.2L                     │
│                                                  │
│  TRADE-OFFS                                      │
│  • HUF money harder to withdraw (partition risk)  │
│  • Stamp duty: ₹12L (Maharashtra, 6%)            │
│  • Rental yield: ~6.5% → ₹13L/year gross         │
│  • Lock-in: Illiquid — 5+ year hold recommended  │
├──────────────────────────────────────────────────┤
│  12-MONTH COMPLIANCE CALENDAR                    │
│  Month 1:  Open HUF current account (SBI)        │
│  Month 1:  Board resolution for property purchase │
│  Month 2:  Transfer ₹2Cr to HUF (gift tax check)  │
│  Month 3:  Execute sale deed — TDS 1% apply       │
│  Month 4:  Register property in HUF name          │
│  Month 5:  Update Schedule AL in HUF ITR          │
│  ...                                             │
│  [Download PDF] [Share with CA] [Save scenario]   │
└──────────────────────────────────────────────────┘
```

Other scenarios the Time Machine handles:

- ESOP exercise timing (this FY vs next FY)
- Relocation to Singapore/Dubai (NRI transition)
- Gifting ₹50L to spouse vs HUF vs trust
- Selling property with Section 54 / 54F exemption planning
- LRS remittance for US stock purchase
- AIF commitment timing vs surcharge slab

Developer notes:

- Module name: `TimeMachineSimulator` / `ScenarioEngine`
- Requires: Tax rule engine, entity graph, ARCHITECT AI for natural language input

- Output: Structured scenario JSON + human-readable report + calendar (iCal export)
- Every number must cite source rule (IT Act section, state stamp duty schedule)

Feature 6: The "If I'm Gone" Vault

The problem in one sentence:
If something happens to you tomorrow, your family doesn't know where 20+ accounts, unlisted shares, and locker keys are.

What CAPSTONE does:

1. **Checks nominees** across every account — flags where nominee is missing or outdated
2. **Creates a secure playbook** — step-by-step guide for spouse/kids
3. **Stores critical documents** — wills, property papers, insurance, locker inventory
4. **Emergency trigger** — if you're unreachable for X days, designated person gets access

What the playbook contains:

```
┌──────────────────────────────────────────────┐
│  IF I'M GONE — Emergency Playbook            │
│  Prepared for: Priya (spouse)                │
│  Last updated: June 15, 2026                 │
├──────────────────────────────────────────────┤
│  STEP 1: Call these people (in order)        │
│    1. Rajesh CA — +91-98xxx — has all tax records │
│    2. HDFC RM Vikram — +91-99xxx — bank accounts  │
│    3. Lawyer Mehta — +91-97xxx — will & trust     │
│                                              │
│  STEP 2: Access these accounts               │
│    • HDFC Savings ***4521 — nominee: Priya ✅     │
│    • Zerodha — nominee: MISSING ⚠️ FIX NOW        │
│    • HUF demat — Karta succession: see trust deed │
│                                              │
│  STEP 3: Physical assets                     │
│    • Locker #442, SBI Bandra — key in home safe   │
│    • Property papers — digital copy in vault      │
│    • Unlisted shares — certificates in locker     │
│                                              │
│  STEP 4: Total wealth summary                │
│    Family net worth: ₹42.3 Cr (as of June 2026)   │
│    [Full breakdown attached — offline PDF]        │
└──────────────────────────────────────────────┘
```

Nominee audit example:

Account	Institution	Nominee	Status
Savings	HDFC	Spouse	✅ Valid
Demat	Zerodha	None	🔴 Missing
MF Folio	ICICI	Father (deceased)	🔴 Outdated
PMS	Marcellus	Spouse	✅ Valid
Insurance	LIC	Spouse	✅ Valid

Developer notes:

- Module name: `IfImGoneVault` / `SuccessionPlaybook`

- Requires: Nominee data from AA/broker APIs where available; manual entry for rest
- Storage: Encrypted document vault, offline PDF generation, optional dead man's switch (inactivity trigger)
- Legal: Not a will substitute — complementary to legal estate planning
- Access: Role-based; successor role activated only by configured trigger (inactivity / manual / legal event)

---

6. Full Product Modules

Beyond the six core features, CAPSTONE includes supporting modules.

Module A: ARCHITECT (AI Copilot)

- Natural language queries about your wealth
- Every answer cites IT Act / SEBI / RBI source
- Ends in Action Cards, not paragraphs
- Voice + WhatsApp interface for daily use

Module B: Advance Tax Autopilot

- Quarterly tax liability projection
- Surcharge slab warnings
- 234B/234C interest calculator
- Auto-adjust after harvest events

Module C: Compliance Radar

- LRS limit tracker (USD 250K/year)
- GIFT City position monitor
- Schedule FA / AL completeness
- Budget impact simulator

Module D: Advisor Mesh

- Permissioned access for CA, RM, spouse, successor
- Audit trail on every view and export
- Scoped visibility (RM sees only their slice)

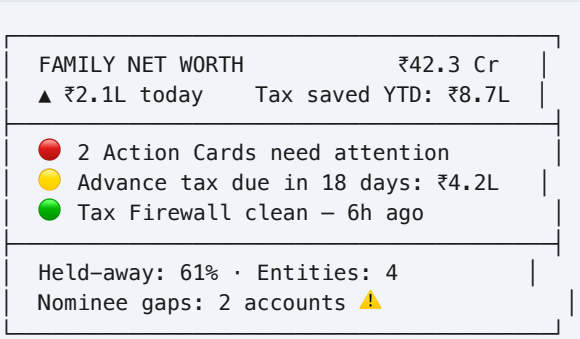

Module E: HNI Intelligence Feed

- Portfolio-specific alerts (not generic market news)
- "Reliance is 8.2% of your wealth — earnings in 4 days"
- "Your PMS underperformed Nifty by 4.1% after fees"

---

7. How the App Feels to Use

Daily glance (30 seconds)

Weekly session (10 minutes)

1. Review God Mode dashboard — any drift in allocation?
2. Check Tax Firewall — any new AIS mismatches?
3. Review harvest Action Cards — execute if beneficial
4. Ask ARCHITECT any pending decision

Monthly session (30 minutes)

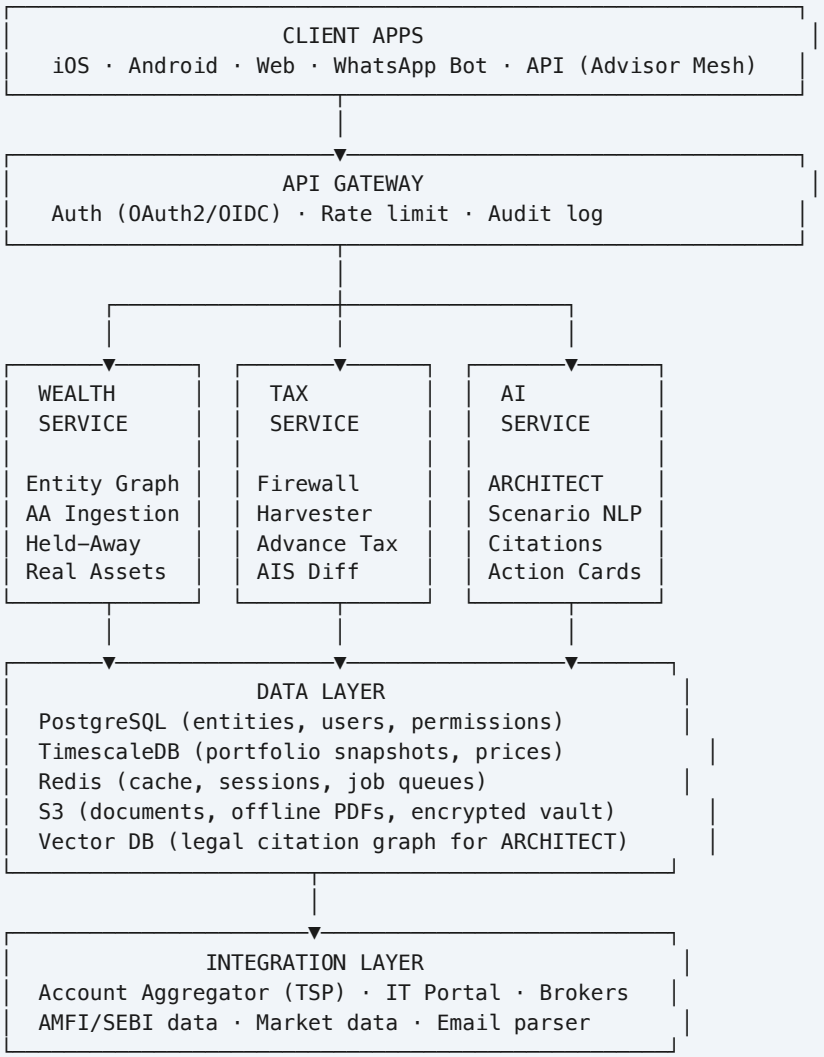

1. Manager Honesty Check scorecard
2. Advance tax payment
3. Time Machine for any upcoming big decision
4. Update If I'm Gone vault if anything changed

Engagement target

User type	Sessions/week
Normal net worth app	1–2
CAPSTONE HNI	**4–6**

8. System Architecture (For Developers)

High-level architecture

Recommended tech stack

Layer	Technology	Why
Mobile	React Native or Flutter	Single codebase, India-first
Web	Next.js	SSR, fast dashboards
API	Node.js (NestJS) or Go	Type safety, performance
Database	PostgreSQL + TimescaleDB	Relational + time-series for portfolios
Cache/Queue	Redis + BullMQ	Job scheduling for nightly AIS scan
AI	Claude/GPT + custom RAG	ARCHITECT with citation graph
Vector DB	Pinecone or pgvector	Legal knowledge retrieval
Infra	AWS Mumbai (ap-south-1)	Data residency in India
Secrets	AWS KMS + HashiCorp Vault	Financial data encryption

Core services (microservice boundaries)

Service	Responsibility	Key APIs
`wealth-service`	Entity graph, net worth, holdings	`GET /family/networth`, `GET /entities/{id}/holdings`
`tax-service`	Firewall, harvester, advance tax	`GET /tax/firewall/status`, `POST /tax/harvest/scan`
`ingestion-service`	AA, CAS, email, document parse	`POST /ingest/aa/consent`, `POST /ingest/cas`
`ai-service`	ARCHITECT, Time Machine NLP	`POST /ai/ask`, `POST /ai/scenario`
`vault-service`	If I'm Gone, documents, nominees	`GET /vault/playbook`, `GET /vault/nominee-audit`
`advisor-service`	Permissions, audit, exports	`POST /advisor/invite`, `GET /audit/log`
`notification-service`	Push, email, WhatsApp	`POST /notify/action-card`

Background jobs (scheduled)

Job	Frequency	Purpose
`aa-sync`	Every 6 hours	Refresh AA data for all consented accounts
`ais-reconcile`	Nightly	Tax-Notice Firewall scan
`harvest-scan`	Daily (market days)	Tax harvest opportunity detection
`price-update`	Every 15 min (market hours)	Mark-to-market for portfolios
`nominee-audit`	Weekly	Check nominee status across accounts
`advance-tax-reminder`	7 days before due date	Quarterly advance tax alerts
`consent-expiry`	Daily	AA consent renewal reminders

---

9. Data Sources & Integrations

Tier 1: Account Aggregator (RBI-regulated)

What it covers: Bank savings, FD, RD, MF folios, demat equity, ETFs, NPS, insurance policies.

How to integrate: Via TSP (Technology Service Provider) — no NBFC licence needed for startup.

Limitations (critical for developers):

Gap	Workaround
No joint accounts	Manual link + spouse consent
No NRE/NRO	Manual statement upload
No HUF/trust/company accounts	Document upload + CA feed
No PMS/AIF	CAS email parser
No real estate	Deed upload
Consent expires	Recurring consent UX + reminders

Tier 2: Off-AA ingestion

Source	Method	Data
Zerodha/Groww/Upstox	CAS PDF + API where available	Lot-level holdings, P&L
PMS/AIF	Quarterly CAS email + manual	NAV, commitments, distributions
Real estate	Sale deed upload + AI extract	Owner, value, location
Unlisted/ESOP	Cap table upload	Shares, vesting schedule
Global brokers	Statement upload	USD holdings
IT Portal	User consent + API/scrape	AIS, 26AS, TIS

Tier 3: Market & reference data

Data	Source
Stock/MF prices	NSE/BSE feed, AMFI
Benchmarks	Nifty 50, Nifty 500, custom
Tax rules	Internal rules engine (versioned per FY)
Legal citations	IT Act, CBDT circulars (vector indexed)

10. Entity & Data Model

Core entities (simplified ER)

```
Family
  └── Person (individual, has PAN)
  └── LegalEntity (HUF, Trust, PvtLtd)
        └── has PAN / registration
        └── has members (Person[])
        └── owns Asset[]

Asset
  └── type: equity | mf | fd | pms | aif | re | gold | insurance | loan | other
  └── custodian: institution name
  └── held_by: Person | LegalEntity
  └── lots: Lot[] (for tax purposes)
  └── nominee: Person | null
  └── source: aa | cas | manual | document_ai

Lot
  └── quantity, buy_date, buy_price, asset_ref
  └── used for: STCG/LTCG calculation, harvest pairing

TaxLedger
  └── fy: 2025-26
  └── realized_gains[], unrealized_gains[]
  └── ais_entries[], mismatches[]
  └── advance_tax_payments[]

ActionCard
  └── type: harvest | firewall_fix | nominee_fix | manager_alert
  └── status: pending | done | dismissed
  └── savings_inr: number
  └── deadline: date
  └── instructions: text

Scenario
  └── query: natural language
  └── assumptions: json
  └── outcomes: [{ path, tax, timeline }]
  └── calendar: [{ month, action }]
```

Entity graph example (JSON)

```
{
  "family_id": "fam_001",
  "total_net_worth_inr": 4230000000,
  "entities": [
    {
      "id": "person_001",
      "type": "individual",
      "name": "Rahul",
      "pan": "ABCPR1234A",
      "net_worth_inr": 1210000000
    },
    {
      "id": "huf_001",
      "type": "huf",
      "name": "Rahul HUF",
      "pan": "ABCPR5678H",
      "karta": "person_001",
      "net_worth_inr": 1840000000
    },
    {
      "id": "trust_001",
      "type": "private_trust",
      "name": "Rahul Family Trust",
      "net_worth_inr": 510000000
    }
  ],
  "held_away_pct": 58,
  "last_sync": "2026-06-30T04:00:00Z"
}
```

---

11. AI Layer — ARCHITECT

What ARCHITECT is

ARCHITECT is CAPSTONE's AI copilot. It is **not** a generic ChatGPT wrapper. It is trained on:

1. **Your** entity graph and portfolio
2. **India-specific** tax and regulatory rules (citation-backed)
3. **Your** goals, life events, and family structure

ARCHITECT rules (non-negotiable)

1. Every tax claim must cite IT Act section or CBDT circular
2. Never recommend a specific product for commission
3. Always end with an Action Card or explicit "consult your CA"
4. Never execute trades or move money
5. Log every conversation for audit

RAG architecture

```
User question
    ↓
Intent classifier (tax / portfolio / scenario / compliance)
    ↓
Retrieve: user portfolio context + relevant legal corpus
    ↓
LLM generates answer with inline citations
    ↓
Action Card generator (if applicable)
    ↓
Response to user
```

Example prompts ARCHITECT handles

User says	ARCHITECT does
"What's my real exposure to IT stocks?"	Sums across all entities and brokers
"Can I gift ₹50L to my HUF?"	Checks clubbing rules, gift tax, cites Section 64
"I'm moving to Singapore"	NRI transition checklist for YOUR portfolio
"Do I need to pay advance tax this quarter?"	Calculates from realized + projected gains

---

12. Security, Privacy & Compliance

Data security

Measure	Implementation
Encryption at rest	AES-256 (AWS KMS)
Encryption in transit	TLS 1.3
PII isolation	Separate schema per family
Document vault	Client-side encryption option for wills
Access audit	Every read/write logged with timestamp + actor
No human access	Policy: engineers never view raw financial data

Regulatory posture

Requirement	Approach
SEBI investment advice	Register as RIA (fee-only) or partner with existing RIA
Account Aggregator	FIU via TSP route
Income Tax data	User consent; read-only; never store IT portal password in plain text
Data residency	All data in India (AWS ap-south-1)
No execution	CAPSTONE advises; user executes via own broker/bank

What CAPSTONE never does

- Holds customer money
- Executes trades
- Sells financial products for commission
- Shares data with banks or RMs without explicit consent
- Provides legal advice (complements lawyer; does not replace)

---

13. Business Model

Pricing

Plan	Price/year	Includes
CAPSTONE Individual	₹1.5L	1 person, 1 entity, core 6 features
CAPSTONE Family	₹3.5L	Up to 4 members, 3 entities, Advisor Mesh
CAPSTONE Enterprise	₹8L+	Unlimited entities, MFO white-label, API access

Revenue principles

- **Fee-only** — no AUM commission, no product distribution
- **Value-aligned** — optional 10% of documented tax saved (performance component)
- **Advisor seats** — ₹25K/seat/year for CA access

Unit economics (target)

Metric	Target
ARPU	₹3.5L/year
CAC	₹50K (via CA channel)
LTV (5 year)	₹15L+
Gross margin	75%+ (software, not people-heavy)
Payback	Customer saves ₹3L+ tax in year 1 → easy ROI proof

---

14. Go-to-Market & Roadmap

Phase 1 (Months 0–12): Wedge

Target: Tech founders, active traders, ESOP holders with ₹5Cr+

Ship:

- God Mode Dashboard (individual + 1 entity)
- Tax-Notice Firewall
- Free Money Button (harvest)
- ARCHITECT v1

Channel: CA partnerships, founder communities, Twitter/LinkedIn

Phase 2 (Months 12–24): Depth

Ship:

- Full entity graph (HUF, trust)
- Honesty Check
- Time Machine
- If I'm Gone Vault
- Advisor Mesh

Channel: Family office referrals, private bank neutral partnerships

Phase 3 (Months 24–36): Scale

Ship:

- NRI/global Indian support
- MFO white-label
- API for external advisors

Channel: B2B2C via CA firms and wealth platforms

---

15. MVP Build Plan (90 Days)

Sprint 1 (Days 1–30): Foundation

- [ ] User auth, family setup, entity creation
- [ ] AA integration via TSP (bank + MF + demat)
- [ ] God Mode Dashboard v1 (single person, AA data only)
- [ ] Basic net worth calculation

Sprint 2 (Days 31–60): Tax Core

- [ ] CAS import (Zerodha, Groww) for lot-level data
- [ ] Tax ledger (STCG/LTCG calculation)
- [ ] Tax-Notice Firewall v1 (manual AIS upload → diff)
- [ ] Free Money Button v1 (harvest scan, Action Cards)

Sprint 3 (Days 61–90): AI + Polish

- [ ] ARCHITECT v1 (portfolio-aware Q&A)
- [ ] Advance tax projection
- [ ] Nominee audit (manual entry)
- [ ] Mobile app beta (iOS + Android)
- [ ] 10 pilot families onboarded

Explicitly NOT in MVP

- Trade execution
- Product distribution / MF buying
- Lending
- Full IT portal API (manual AIS upload OK for v1)
- HUF/trust automation (manual entry OK for v1)

---

16. Success Metrics

Metric	Month 6	Month 12	Month 36
Families onboarded	50	500	8,000
Avg net worth tracked	₹10 Cr	₹12 Cr	₹18 Cr
Weekly active rate	45%	55%	70%
Tax documented saved (cumulative)	₹5 Cr	₹50 Cr	₹800 Cr
Firewall mismatches caught	200	2,000	30,000
NPS	60	65	75
ARPU	₹2L	₹2.5L	₹4L

---

17. Risks & How We Handle Them

Risk	Likelihood	Impact	Mitigation
AA doesn't cover PMS/HUF	High	High	Document AI + CAS parser from Day 1
SEBI advice regulations	Medium	High	Fee-only RIA registration
Banks build similar	Low	Medium	Banks can't show competitor held-away (structural conflict)
Data inaccuracy	Medium	High	Confidence scores; human verify for off-AA
User trusts AI too much	Medium	High	Always cite sources; "consult CA" for edge cases
IT portal API changes	Medium	Medium	Manual AIS upload fallback
Competitor copies	Medium	Medium	Entity graph + tax engine depth = 18mo moat

---

18. Glossary

Term	Meaning
HNI	High Net-worth Individual — typically ₹5 Cr+ investable wealth
UHNW	Ultra High Net-worth — typically ₹50 Cr+ or $30M+
AA	Account Aggregator — RBI-regulated data sharing framework
FIP	Financial Information Provider — bank/broker that shares data
FIU	Financial Information User — app that receives data (CAPSTONE)
TSP	Technology Service Provider — integrates AA without own licence
AIS	Annual Information Statement — government's record of your income
26AS	Tax credit statement — all TDS deducted on your PAN
TIS	Taxpayer Information Summary — summary from IT portal
HUF	Hindu Undivided Family — tax entity for Hindu families
PMS	Portfolio Management Service — min ₹50L, professional stock management
AIF	Alternative Investment Fund — min ₹1Cr, PE/VC/credit funds
LRS	Liberalised Remittance Scheme — $250K/year overseas remittance limit
STCG	Short Term Capital Gains — held < 12 months (equity)
LTCG	Long Term Capital Gains — held > 12 months (equity)
Harvesting	Selling losers to offset gains and reduce tax
Held-away	Assets not managed by your primary advisor/bank
RIA	Registered Investment Adviser — SEBI-regulated fee-only advisor
CAS	Consolidated Account Statement — all MF holdings in one PDF
Schedule FA	Foreign Assets schedule in ITR
Schedule AL	Assets & Liabilities schedule (income > ₹1 Cr)
RM	Relationship Manager — bank wealth advisor
ARCHITECT	CAPSTONE's AI copilot name

19. Appendix: Competitive Landscape

Company	Category	Strength	Gap vs CAPSTONE
FOLO	Net worth app	AA aggregation, 500+ sources	No tax engine, no entities
Vault	Net worth app	AI categorization	No firewall, no harvest
WealthNest	Family office app	4I framework (investment, insurance, tax, inheritance)	Tax/inheritance "coming soon"
NetWorthOS	HNI platform	Genie AI, If I'm Gone	Early stage; no AIS firewall
Famli	Family wealth	SEBI RIA, ISO 27001	No continuous tax simulation
Equirus	Wealth firm tech	Research integration	Captive to Equirus AUM
360 ONE	Private bank tech	RM workbench, held-away	Captive to 360 ONE clients
EZTax	Tax filing	HNI ITR, 42 countries	Seasonal; no live portfolio
VittSphere	AI personal CFO	Capital gains tracker	Mass affluent; not entity graph
Saltman	Tax AI	Citation-backed Q&A	No portfolio integration
Asset Vantage	Family office B2B	Entity reporting, GL	Enterprise ₹50L+ ACV
Addepar	Global UHNW	Entity look-through, 500+ feeds	No India tax; enterprise only

Document Control
